# Ideation Phase

## Brainstorming-Idea Generation-Prioritization

| | |

| **Date** | **4 March 2026** |
| **Team ID** | **SWTID-2026-8059** |
| **Project Name** | **Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking** |
| **Maximum Marks** | **4 Marks** |

## Brainstorming:

**Brainstorming** is a creative process used to generate multiple ideas or solutions for a particular problem. In software or system development, brainstorming helps teams explore different ways to solve an issue before selecting the best solution.

In this project, brainstorming was used to identify possible ways to **automate employee data management and improve incident handling**. The team discussed different approaches to import employee data, maintain relationships between records, and automatically retrieve related information.

## Idea Prioritization

**Idea prioritization** is the process of evaluating the generated ideas and selecting the most effective solution based on feasibility, efficiency, and system capability.

For this project, the ideas were evaluated based on:

- Ease of implementation
- System automation capability
- Data accuracy
- Integration with ServiceNow platform
- Impact on incident management workflow

# Brainstorming and Idea Prioritization Diagram

## 1. Brainstorming Stage

In this stage, different ideas are generated to solve the problem of managing employee data and incident handling. Possible ideas include:

- Manual employee data entry
- Creating a separate employee database
- Automating data import
- Connecting employee, department, and manager information

## 2. Idea Evaluation

Each idea is analyzed based on:

- Feasibility
- Automation capability
- Integration with the system
- Efficiency and accuracy

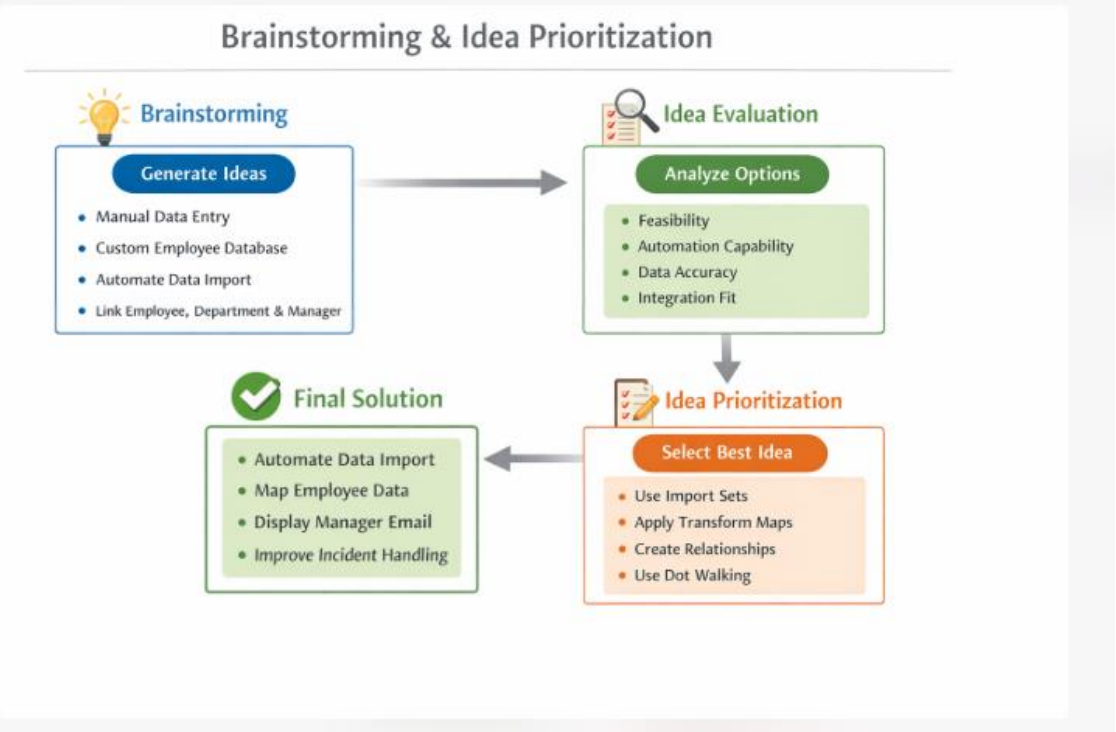
## 3. Idea Prioritization

The best idea is selected after comparing all options.
For this project, the prioritized solution is:

- Use **Import Sets** to import employee data
- Use **Transform Maps** for field mapping
- Maintain relationships between **Employee → Department → Manager**
- Use **Dot Walking** to automatically retrieve the **manager's email** when an incident is assigned.

## 4. Final Solution

The selected solution improves **automation, data accuracy, and incident management efficiency**.



Brainstorming & Idea Prioritization
Brainstorming
Generate Ideas
Manual Data Entry
Custom Employee Database
Automate Data Import
Link Employee, Department & Manager
Idea Evaluation
Analyze Options
Feasibility
Automation Capability
Data Accuracy
Integration Fit
Idea Prioritization
Select Best Idea
Use Import Sets
Apply Transform Maps
Create Relationships
Use Dot Walking
Final Solution
Automate Data Import
Map Employee Data
Display Manager Email
Improve Incident Handling
