PROJECT TITLE	Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking
MAXIMUM MARKS	4 Marks

Introduction :

User stories describe system functionality from the perspective of users. These stories help understand how the system should behave.

User Story 1 **:** Import Employee Data

Title **:** Import Employee Data from External System

Description:
As a ServiceNow administrator, I want to import employee data from an external file so that employee records can be automatically created in the system.

Acceptance Criteria

- The system should accept CSV or Excel files
- The data should be imported using Import Sets.
- Employee records should be created automatically.

User Story 2 **:** Map Employee Data to ServiceNow Tables

Title **:** Map Imported Data

Description:
As a ServiceNow administrator, I want to map imported data fields to the user table so that employee records are correctly stored.

Acceptance Criteria

- Transform Map should map fields correctly.
- Data should be stored in the **sys_user table**.
- Manager relationship should be correctly mapped.

User Story 3 **:** Display Department Information

Title **:** Show Employee Department

Description:
As a service desk agent, I want to see the department of the assigned employee when creating an incident.

Acceptance Criteria

- Department should be automatically displayed.
- No manual lookup should be required.

User Story 4 : Display Manager Information

Title **:** Show Manager Email

Description:
As a service desk agent, I want to see the manager's email when assigning an incident to an employee.

Acceptance Criteria

- Manager details should be retrieved automatically.
- Dot walking should be used to fetch the data.

User Story 5 : Improve Incident Handling

Title **:** Automated Relationship Mapping

Description:

As a system user, I want employee relationships to be automatically mapped so that incident handling becomes faster.
